

IDENTITY MANAGEMENT

Take control and Protect Your Data Assets

DYNAMIC SYSTEMS INC.®

Your Data Is Our Business

DYNAMIC SYSTEMS CAN HELP YOU MAINTAIN CONTROL of who has access to your valuable data assets and computing applications with Identity Management (IdM) solutions from Sun. With IdM, you can finally put an end to the time-consuming battle to protect the integrity and privacy of your IT infrastructure and easily meet compliance requirements. Turn to Dynamic Systems and IdM when you're ready to:

Gain Essential Visibility. IdM delivers the instant knowledge of who has access to what level of information across your entire enterprise – at any time. By providing a central point for monitoring and enforcing user access-privileges, you are better positioned to comply with laws governing data integrity and privacy.

Detect Security, Regulation and Compliance Violations. An integrated IdM solution lets you scan your critical

applications for audit policy violations, so you are always prepared to address problems immediately and better monitor user-access privileges.

Automate Compliance and Audit Procedures. When you automate the costly and time-consuming manual processes of collecting compliance audit data, you not only eliminate the administrative hassles of meeting requirements, but also reduce the risk of manual errors.

Increase Productivity And Flexibility.

Instead of falling victim to a crisis-mode mentality when compliance issues arise, IdM helps you proactively monitor and report on user-access, without stopping everything to address a problem or respond to an audit. Plus, as IdM uses an open integrated infrastructure, you can increase productivity, collaboration and flexibility across multiple heterogeneous agencies and complex IT environments.

IdM: NOT JUST ANOTHER ACRONYM

IdM is much more than just a widely-used acronym for Identity Management. With an IdM solution from Dynamic Systems, you can easily automate and regain centralized control of user-access to your data and applications, even across multiple, heterogeneous agencies and IT environments.

IdM effectively ends the time-consuming struggle to protect the integrity and privacy of your enterprise while meeting the multitude of compliance requirements, including HSPD-12, now facing your organization. By automating all of the costly manual processes associated with monitoring, tracking, reporting and continually auditing user-access, you'll save time.

KEY BENEFITS

Centralize Security

Enforce Audit Policies

Enhance Visibility

Detect Security, Regulatory and Compliance Violations

Automate Auditing Procedures

Maintain Control Over Data Assets

Create Repeatable, Sustainable Compliance Procedures

Cut Costs for Provisioning and Identity Auditing

IDENTITY MANAGEMENT

Take control and Protect Your Data Assets

DYNAMIC SYSTEMS INC.®

Your Data Is Our Business

WHY DYNAMIC SYSTEMS?

Dynamic Systems provides technology solutions that make data management simple. We work closely with our clients to understand current challenges, long-term goals and budget requirements – then combine best-in-class hardware, software and support to streamline maintenance and optimize performance.

Since 1991, Dynamic Systems has built a solid reputation as the IT experts of choice with a relentless focus on customer satisfaction and strong understanding of our clients' core requirements. Our cleared resources, financing options and contract vehicles make it very easy to work with us, particularly for our government and education customers. As a small, minority-owned business with enterprise-class resources, partnerships and state-of-the-art facilities, we provide the IT consulting, product advice and training you need to succeed.

GET STARTED TODAY

Let the experts at Dynamic Systems help you manage, protect, store, verify and safely share identity data throughout your agency or enterprise. Visit us online at www.DynamicSystemsInc.com or call us at 310.337.4400 to learn more about IdM today.

Custom IdM Solutions from Sun and Dynamic Systems

Dynamic Systems can help you successfully implement a sustainable and scalable IdM solution with components from the Sun Identity Management Product Suite.

- Custom IdM solutions utilizing innovative Sun™ IdM products provide your agency or department with affordable, sustainable and scalable HSPD-12 compliance and general audit-defense.
- To maximize the benefits of IdM, consider implementing and integrating a custom IdM Solution designed specifically to meet the needs of your organization using components from the Sun™ Identity Management Product Suite.
- Sun IdM Solutions reduce risk and provide centralized control to protect sensitive enterprise data from both internal and external security threats.
- As a Sun Partner, Dynamic Systems provides the superior expertise along with the very best prices (as well as flexible financing options) to help you quickly implement and deploy your custom IdM solution.

DYNAMIC SYSTEMS' AND SUN'S IDENTITY MANAGEMENT PRODUCT SUITE INCLUDES:

Sun Java System Identity Manager: A comprehensive solution for managing identity profiles and permissions in a manner that can be fully tracked, audited and reported.

Sun Java System Access Manager: A standard-based solution for secure access, which enables interoperability across multiple technology platforms and extranets.

Sun Java System Directory Server Enterprise Edition: The foundation for the entire enterprise IdM infrastructure delivers directory services, security and failover capabilities and synchronization with Microsoft Active Directory.

Sun Java System Identity Auditor: Provides capability to monitor and verify key identity controls, detect and call for action on violations of those controls and fully report security events.
